

Tutorial - 43.

Random Forest.

When & How to use decision tree.

① Since, DT has

a) Low bias → Training error is less

b) High Variance → Test data faces many error.

converts itself or H.V into Low variance
which means, DT's majority votes are taken
in consideration

② Say, if in Above, Classification is used.

↳ Uses majority votes

Regression takes in the aspect of
↳ mean, median

* How to know

How many DT is to be used

Ans → Hyper Parameter
