

Tutorial : 42 .

Combining multiple models

Ensemble Techniques.

Bagging

Boosting

(works as Bootstrap Aggregation)

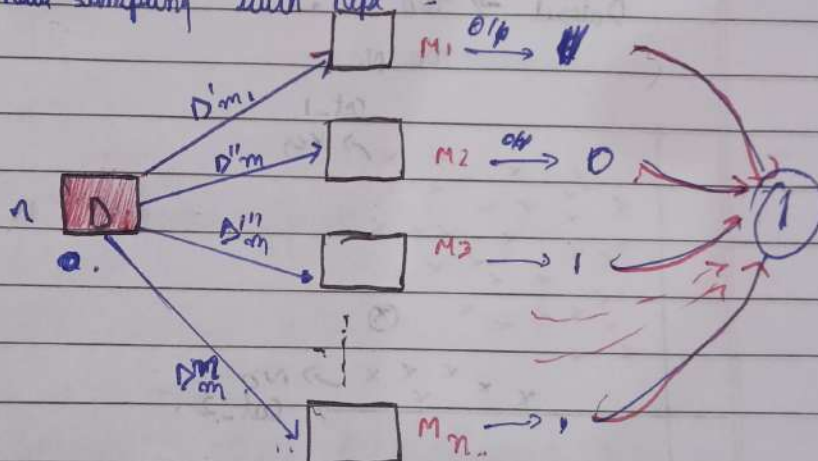

① Random Forest .

① ADA Boost

② Gradient Boosting

③ XgBoost-

* Bagging - $\rightarrow$ Random sampling with Repl²

D is a sample & using D , $M_1, M_2, \dots, M_n$ are also being trained which is solely Bagging

* Bootstrap aggregation - From D , giving diff. sample / features to $M_1, \dots, M_n$ and then aggregating the (O/P)s. & giving the final aggregation
