

• K-nearest Neighbour
(in EDA & feature handling).

① If $K=5$.

> find K nearest points to query

> Calculate distance K (pt $\rightarrow$ query)

> How many n - n $\in$ category 1 & 2

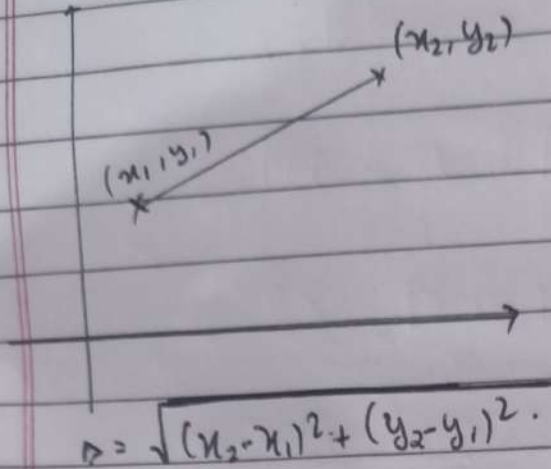

>

Calculating distances

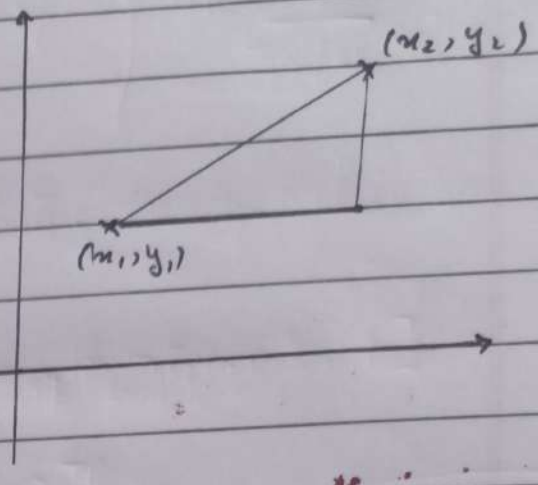

① Euclidean Distance

① Manhattan Distance

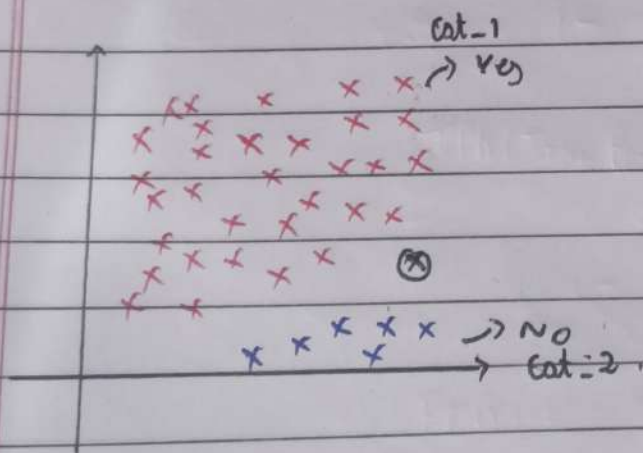

① Euclidean Distance

② Manhattan Distance

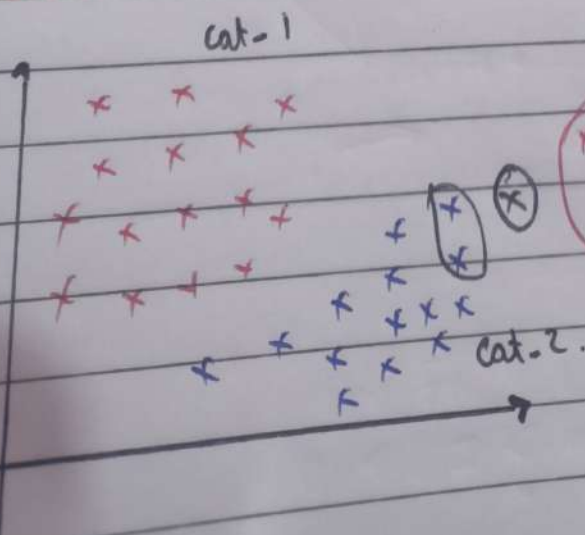

Dataset $\rightarrow$ 900 Yes •
100 No •

$k = 150$ (nearest neighbours)
