

T-test, CHI Square, ANOVA.

① One Categorical Feature

$H_0 \rightarrow$ There is no diff. (Reject)

$H_1 \rightarrow$ There is a diff.

Test $\rightarrow$ One sample propⁿ test

Gender	Age	Weight	height
M	Elderly	70	1.21
F	Adult	65	1.2
M	Adult	65	1.4
M	Child	20	1
F	Adult	55	1.3
M	Elderly	80	1.3

$P < 0.05 \rightarrow \alpha$ (Significance Value)

② Two Categorical Features

$H_0 \rightarrow$ There is no diff. (Rej)

$H_1 \rightarrow$ There is a diff.

Test $\rightarrow$ CHI Square Test.

③ One Continuous Numerical Variable (Weight / height)

$H_0 \rightarrow$ No diff. (Rej)

$H_1 \rightarrow$ Diff.

Test $\rightarrow$ T-test.

④ Two cont. num. var.

$H_0 \rightarrow$ No diff. relationship

$H_1 \rightarrow$ There's a Relationship.

Test $\rightarrow$ Correlation

⑤ Two or more categories in a feature (Age group)

$H_0 \rightarrow$ No diff.

$H_1 \rightarrow$ There's a diff.

Test $\rightarrow$ Anova test
